D:\college\dsbda>scala ExampleString.scala
Value of text is: You are reading SCALA programming language.
```

```
D:\college\dsbda>scala LargestNumber.scala
Largest number is: 30
```

```
D:\college\dsbda>scala Name.scala
My name is ABC!
```

```
D:\college\dsbda>scala CheckNumber.scala
Enter a number:
109
Number is positive
```

Spark Programs:

ExampleString.scala :

```
object ExampleString {  
  def main(args: Array[String]): Unit = {  
    // Declare and assign string variable "text"  
    val text: String = "You are reading SCALA programming language."  
    // Print the value of string variable "text"  
    println("Value of text is: " + text)  
  }  
}
```

largestNumber.scala:

```
object ExFindLargest {  
  def main(args: Array[String]): Unit = {  
    var number1 = 20  
    var number2 = 30  
  
    if (number1 > number2) {  
      println("Largest number is: " + number1)  
    } else {  
      println("Largest number is: " + number2)  
    }  
  }  
}
```

Name.scala:

```
object ExPrintName {  
  def main(args: Array[String]): Unit = {  
    println("My name is ABC!")  
  }  
}
```

CheckNumber.scala :

```
object ExCheckNumber {  
  def main(args: Array[String]): Unit = {  
    // Prompt the user to enter a number  
    println("Enter a number:")  
  
    // Read the input number from the user  
    val input = scala.io.StdIn.readInt()
```

```
// Check if the number is zero, positive, or negative
if (input == 0) {
    println("Number is zero")
} else if (input > 0) {
    println("Number is positive")
} else {
    println("Number is negative")
}
}
```
